## Chapter-2

### Start the Installation process

The steps of installation are simple and short. Before install make sure that the software installer is not corrupted. To open, double click the installer of PCVITA Express Migrator for SharePoint installer. Click on next button to proceed.

### License agreements

You must read the software license agreement. Accept the license agreement? Check the button (I accept the agreements) and proceed next.

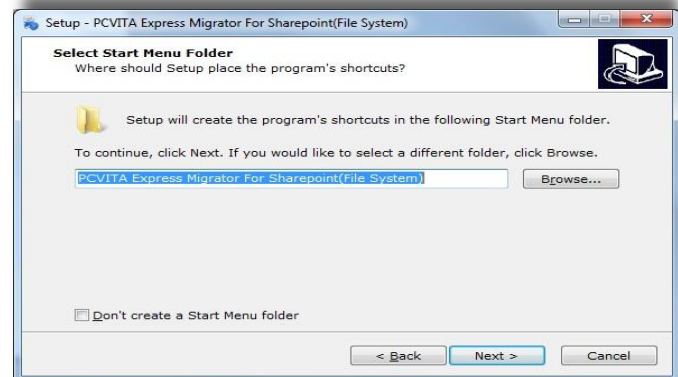

### Location and setup types

The installer offers a default destination directory where PCVITA Express Migrator for SharePoint be installed. Accept it or define one. It is highly recommended to use the default path. Click on next. In this window, the wizard will offer a default location where to create a shortcuts folder in a start menu folder. Accept it or define a new one. To proceed, click on next.

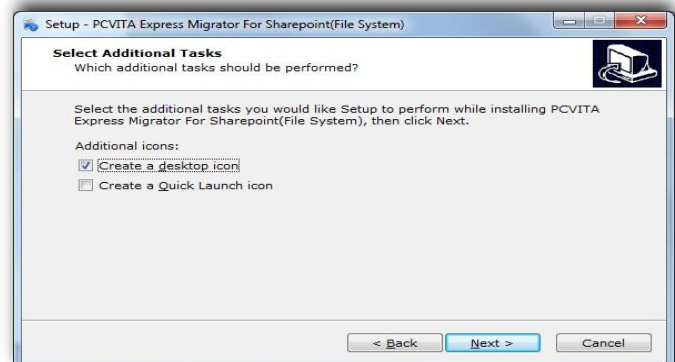

The right hand side snapshot shows the default path where Express Migrator for SharePoint (File System) be installed or Click on Browse to set your own destination location.

Start set your location menu folder where setup should place the program's shortcut. Or Check for don't create a Start Menu Folder

There are two additional tasks for creation of Icons. Check on the option to create your own desire icons

It is highly recommended, you must check the destination location. Click on Install to finish the installation process.

### Finish the Installation and launch

Check or leave the options for shortcuts creation. Proceed next and click “install” to finish the installation. Click finish and launch.

### Registration or Activation

For demo users, the PCVITA Express Migrator for SharePoint has a constraint of 500MB file system and attributes migration to SharePoint server in bulk. To ask for the full version or activation, you must click Activation or Buy now option in the navigation pane. Once you get the full version installed in your system, updating is simpler, just the need of click and go. Again, once you close the application, you will be invited to PCVITA Express Migrator for SharePoint website for new updates and new release information.

## Chapter-3

### Setting and Configuration

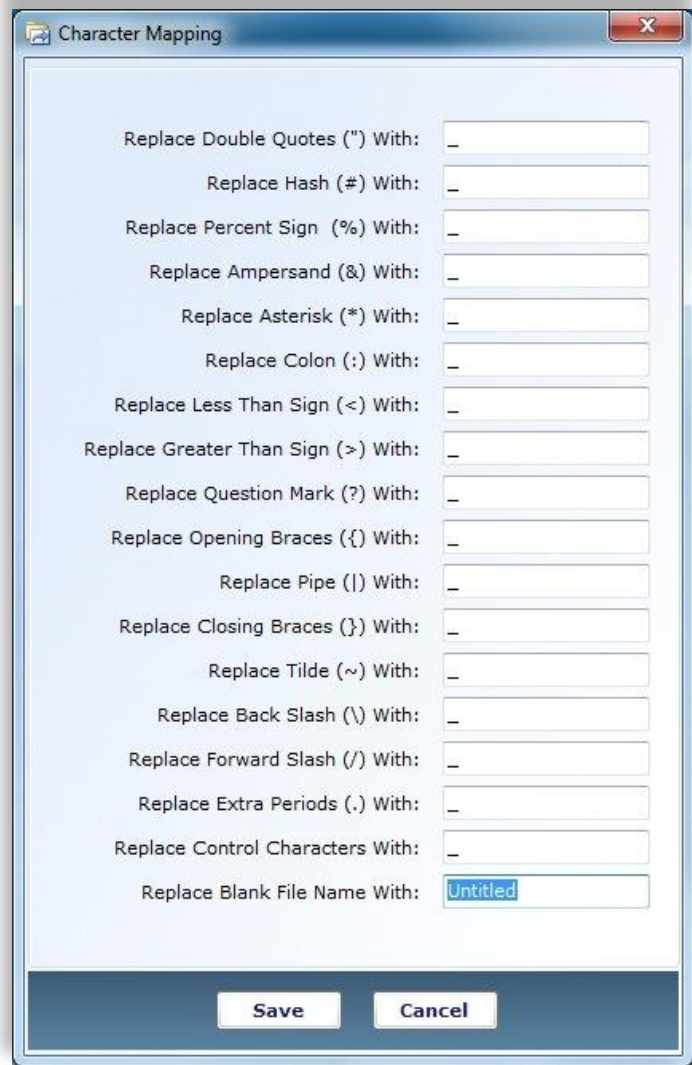

To set a default web service path, go to setting menu, select configuration. Enter your web service path, click on save. Similarly, to replace a special characters click on configuration and replace the specific character by entering the permitted character. By default, the software set underscore (\_) for mapping. To finish, click on save button.\

For On-Premise file system migration job. Set your local server location, click on Save and restart the application to see changes.

As you know, SharePoint Server does not support most special characters. Significantly, PCVITA Express Migrator for SharePoint (File System) allows you to start map special character without any hassles.

By default, the software replaces the given special character into underscore [ \_ ].

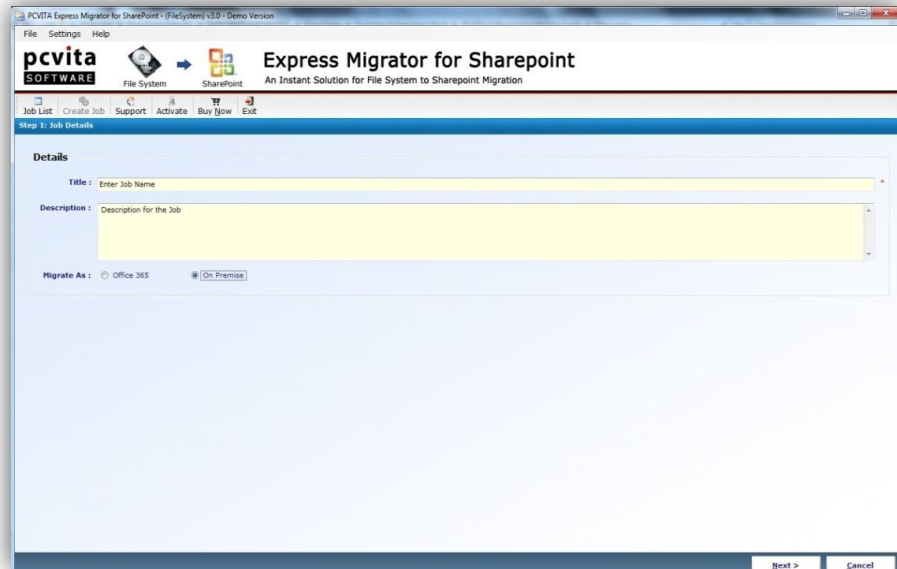

## Entering a Job Details

### Migrate As - For On Premise

Enter the title of the job, description about the job and check on the target migration from the two options to exempt for future complexity and restraints. Click next to continue

#### Fill detail Information

- Title of the Job and
- A brief description about the Job or task
- Choose On Premise

(Note: A job is a logical name along with description; represent a set of files and folder to be migrate into a particular destination Microsoft SharePoint Document Library)

## Browse a Source Location

In this Step 2: Source File System window. Click on the Add files button to start add single or multiple file system. Similarly, to that of Add Folder. Click a Remove button for the unwanted selected file(s) and folder. Click next to proceed.

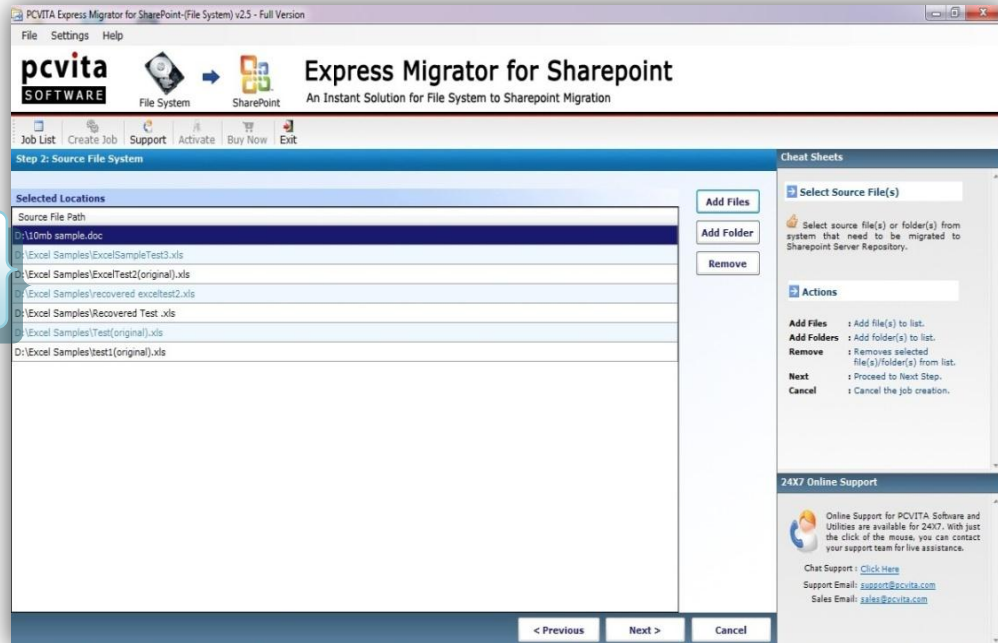

Click Add Files /Add Folder button to add multiple File Systems

The below snapshot display the selected files and its specific location from the local hard drive. Interestingly, the software

will allow you to add more files, folder and remove in this stage without hassles. Click Next to continue

## How to Apply Filters

Filtering of files, its attributes and dates is indeed crucial and significant to prevent in the matter of replication and duplication in the time if migration jobs.

### Attributes Filter Include

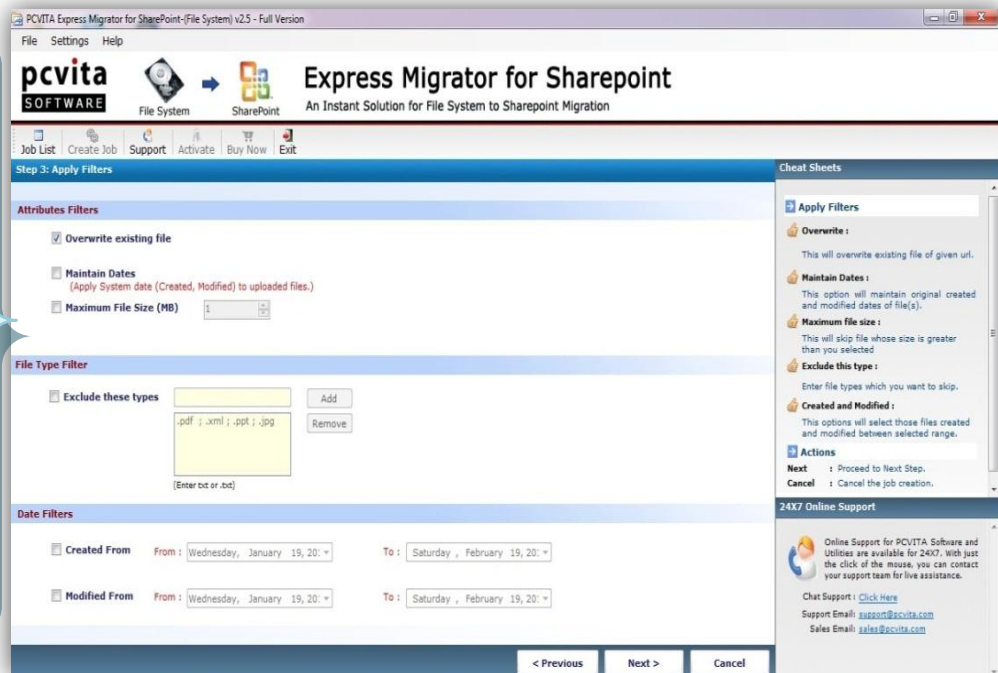

Overwrite an existing file, date specific and specific file size (MB)

### File Type Filter Includes

Enter the file extension which you would like to exclude in the migration process

### Date Filters Includes

Filtering is done by date as well. Start filter by Created from or modified from

## There are three ways of filtration:

### 1. *Attributes Filters*

By default, the software already checked the options Overwrite existing file, Maintain Folder Hierarchy and Create a Root Folder in a SharePoint Server Document Library. Besides, check the option Maintain Dates to maintain the migration date. Though, Microsoft SharePoint has a limitation of 50MB size migrate able. Check the option Maximum File Size (MB) flexibly or your desire size.

### 2. *File Type Filter*

Start chuck out the unwanted file extension by adding them into the blank field. Since, by default Microsoft SharePoint server sustains certain file extension. Thus, could eventually result data replication and error.

### 3. *Date Filters*

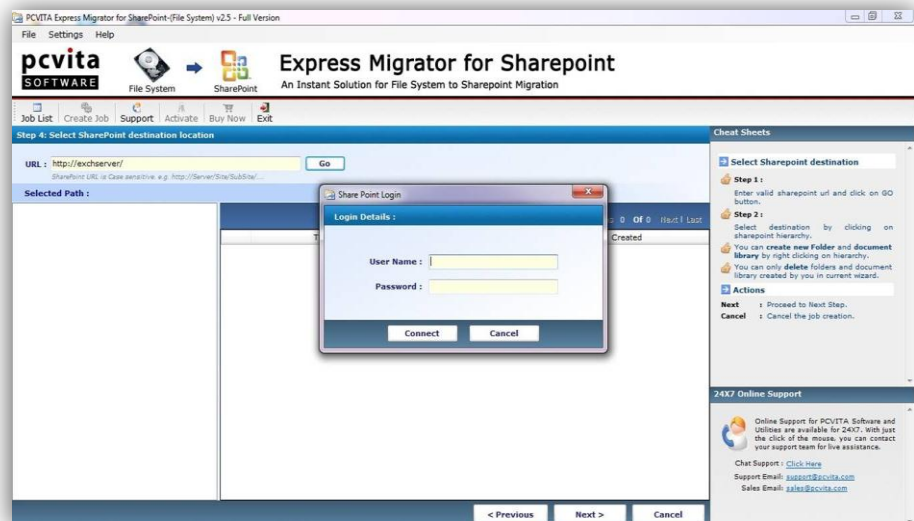

To start migrate by Create from, check the option first, and then select the criteria from (day, date and year) to the specific (day, date and year). Similarly, check a modified on and select a specific criteria. Click next to proceed.

## Select SharePoint destination location

To select the destination directory in SharePoint server you must provide your valid SharePoint URL to start the connection, click on Go button to fill your account information (i.e. User Name and Password) and

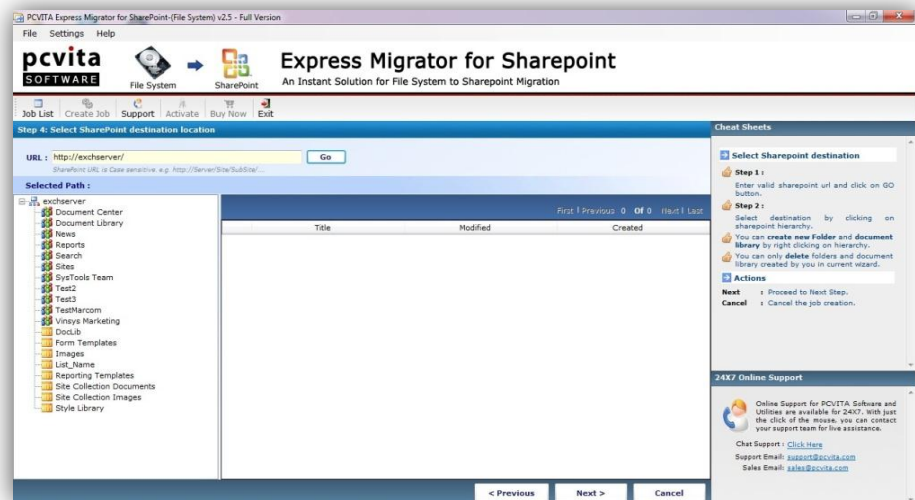

Provide your SharePoint  
Server URL, Click Go

To connect, provide your  
SharePoint login detail

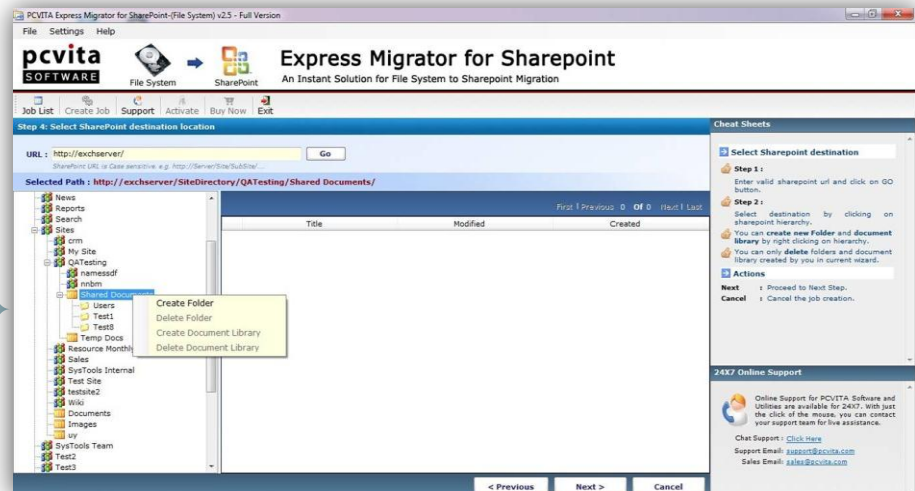

Select your destination directory by clicking on the hierarchy directory in your server. As given in the snapshot below.

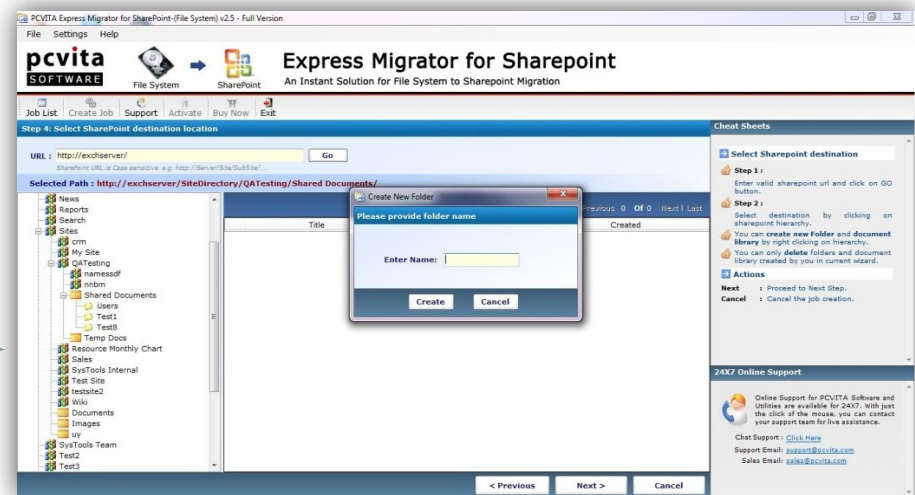

Besides, you can create New Folder, Document Library by clicking on the hierarchy and can delete as well.

The right hand side snapshot displays the creation of Create Folder

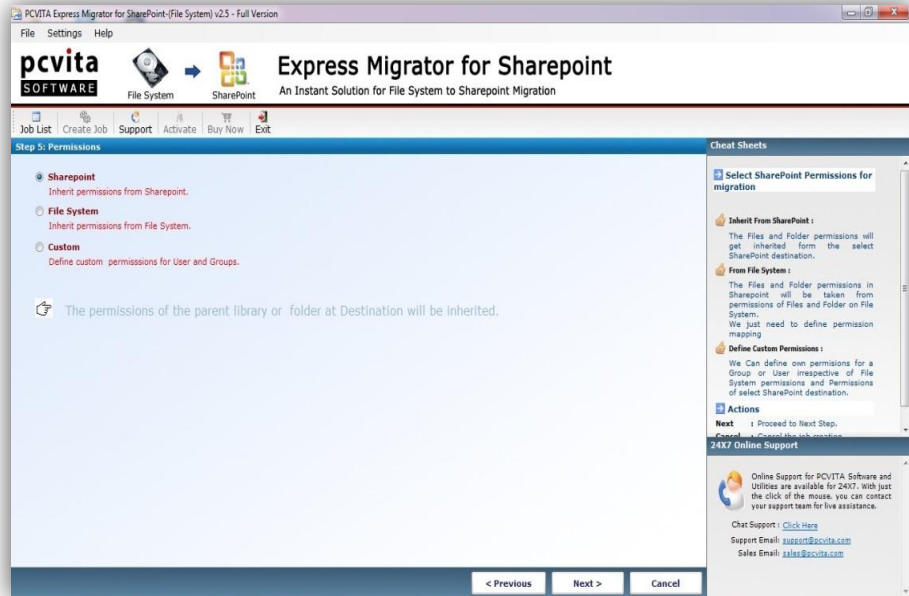

Enter your desire Folder Name in the Create New Folder display box. Click on Create to finish.

1. To inherit from **SharePoint**, the file and folder permissions will get inherited from the select SharePoint destination.

2. To inherit from the **File System**, the files and folder permissions in SharePoint will be taken from permissions of files and folder on the system.

3. In Custom, you need to define new permission for group or user irrespective of file system permission and permission of select SharePoint destination

## Permission

**There are three types of Permission:**

### 1. **SharePoint Permission**

This is the default permission level for SharePoint migration. The permission of the root Document Library is inherited in this scenario.

### 2. **File System**

The File System permission should be checked to start File or Folder migration specific to a Document Library.

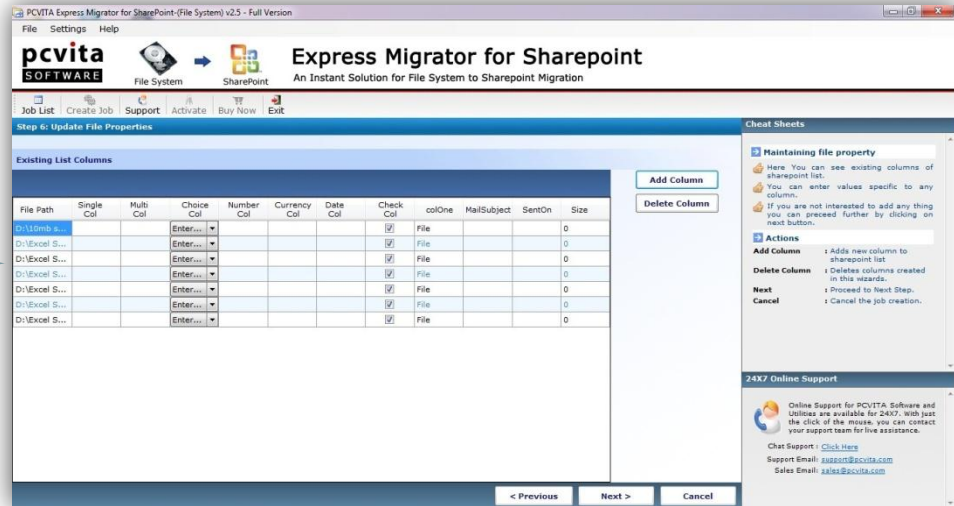

**Note:** The users/groups should be present in the SharePoint member's directory

### 3. **Custom**

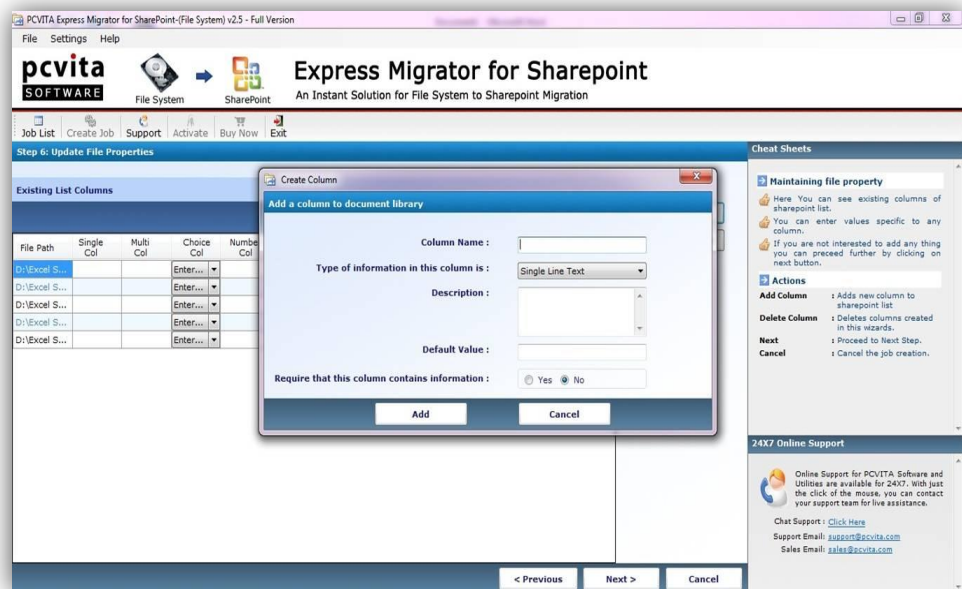

Checking on this button (Custom) is significant and genuine when users like to define a custom security policy on the migrated Document Library. Click next to continue.

## Update File Properties

The wizard allows you to update file properties by just adding new column or delete the existing column in your SharePoint Server.

The right hand side snapshot displays the steps to add a column to document library.

## Associate Meta Information

Window display the associated meta-information for the migrated file(s), you can start change the default setting by

- Altering column from the existing column with the defaults values
- Adding new column and remove column with appropriate type and default values
- Allow to provide data for all columns for each selected file(s)

It is recommended, you must skip the process in the case of uninterested.

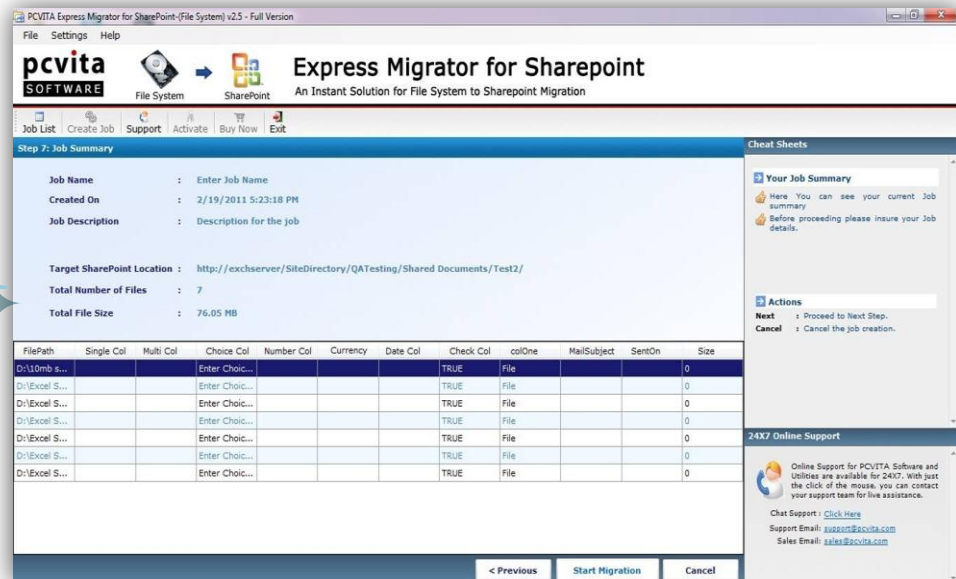

## Job Summary

Before you trigger on the “Start Migration” button, it is highly recommended that you must check the job summary

### Job Summary

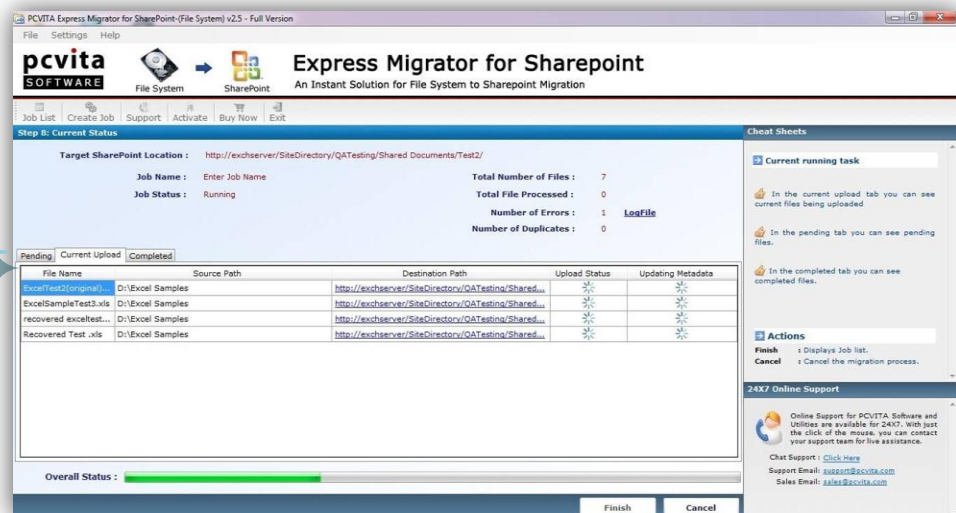

One of the best functionality about PCVITA Express Migrator for SharePoint (File System) is the Job Summarization functionality. Significant for user to recheck back the entire setting, just before the migration process

## Current Status

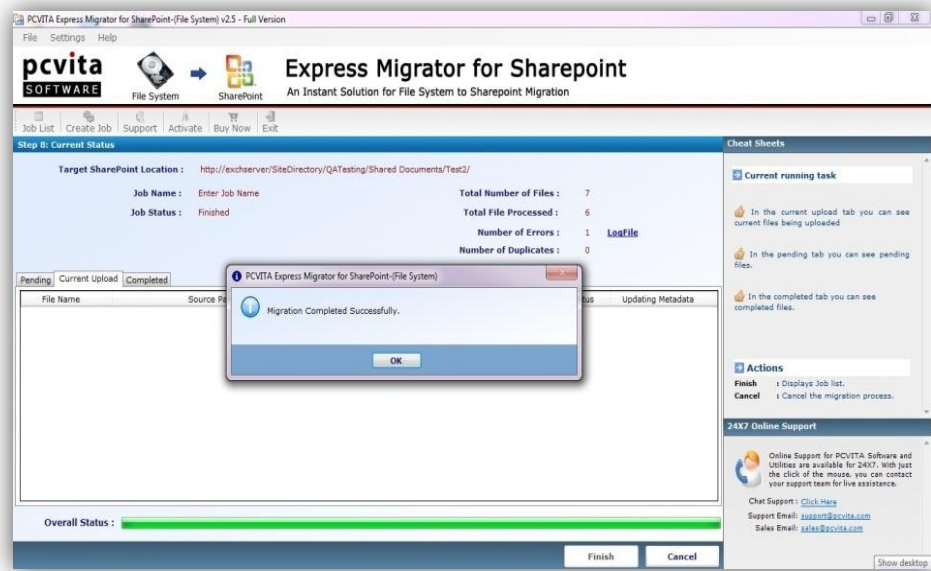

### Current Status

For more information about the current effects on the migration process, the software display the entirely file location, job name, job status, total number of files, total file processed, number of errors and number of duplicates as well.

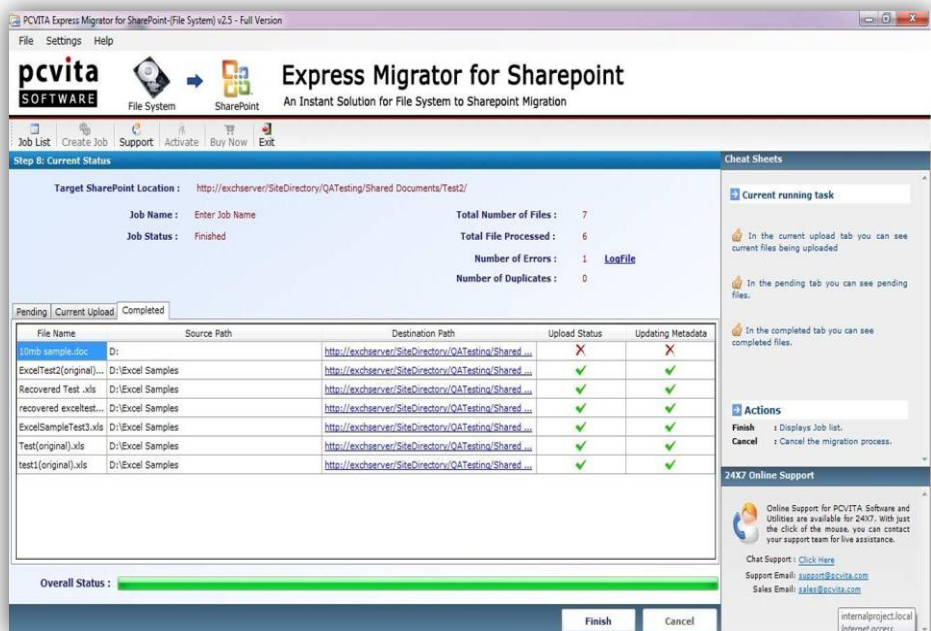

This message box snapshot shows the completion of the migration job. For more details about error generation, go to Number of Errors: Log file

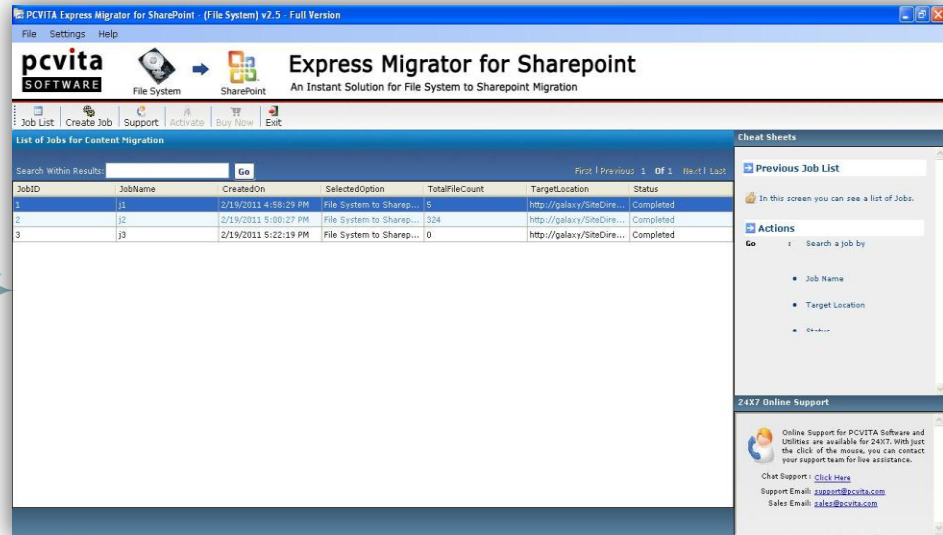

Here, in the completed tab, wizard display the entire file information as of file name, Source Path, Destination Path, Upload Status and Updating Metadata in the detailed pane

## List of Jobs for Content Migration

### List of Jobs

Innovatively, the software wizard displays the whole information regarding Job ID, Job Name, and Created-On, Selected-Option, Total-File Count, Target Location and Status. It will extensively help for sorting and searching files.

## Chapter- 4

### Quit or Exit

To quit the application, go to→ system tray→ right click the icon→ and click Exit.

Or

Go to File Menu →Click Exit → yes or directly close from the window

## Chapter- 5
